

RACM and TCMs

Karina O'Connor,
EPA Region 9

RACM - Step 1

- (Step 1) All measures should be reviewed and considered before rejecting measures
- Potential Measures
 - All measures suggested by the public
 - Any used in other areas
 - Any identified in EPA Guidance

Step 2 - RACM test for Rejected measures -

- Technological or Economically Feasible?
- Could all of the rejected measures cumulatively advance the attainment year?
- Can some measures be partially implemented?

Take Away Messages

- Area must consider all available measures
- **All** Rejected Measures that are feasible must be examined *collectively* (Stationary, area and mobile)
- Incomplete RACM analyses could derail emission budget adequacy and SIP approval
