16. ABSTRACT

On August 10, 2005, President George W. Bush signed into law the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU). SAFETEA-LU established a new core Highway Safety Improvement Program (HSIP) to achieve a significant reduction in traffic fatalities and serious injuries on all public roads. A provision of HSIP requires every state to submit an annual report describing not less than 5 percent of its public roadway locations exhibiting the most severe safety needs to the Federal Highway Administration (FHWA) by August 31 of each year (23 USC § 148(c)(1)(D)). This report satisfies the HSIP SAFETEA-LU requirements and complies with FHWA guidance.

- This report accomplishes the following two items:
1. Satisfies the HSIP reporting requirement - The report is one of four reports required by SAFETEA-LU for the State to receive its full apportionment of federal HSIP funding. In addition, the development of an approved Strategic Highway Safety Plan (SHSP) is required.
 2. Raises public awareness of the safety needs and challenges in the State - In accordance with SAFETEA-LU, the U.S. Department of Transportation (USDOT) promotes public awareness by posting the approved Report for California, and other states' annual reports, on FHWA's Web site.

Section I. Introduction

On August 10, 2005, President George W. Bush signed into law the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU). SAFETEA-LU established a new core Highway Safety Improvement Program (HSIP) to achieve a significant reduction in traffic fatalities and serious injuries on all public roads. A provision of HSIP requires every state to submit an annual report describing not less than 5 percent of its public roadway locations exhibiting the most severe safety needs to the Federal Highway Administration (FHWA) by August 31 of each year (23 USC § 148(c)(1)(D)). This report satisfies the HSIP SAFETEA-LU requirements and complies with FHWA guidance.

Section II. Purpose

The “2009 California Highway Safety Improvement Program 5 Percent Report” (Report) begins the investigative process and is not intended to be used as a tool for the allocation of funding for, or prioritization of, public roadway safety projects.

The purpose of the Report is to:

1. **Satisfy the HSIP reporting requirement.** The Report is one of four reports required by SAFETEA-LU for the State to receive its full apportionment of federal HSIP funding. In addition, the development of an approved Strategic Highway Safety Plan (SHSP) is required.
2. **Raise public awareness of the safety needs and challenges in the State.** In accordance with SAFETEA-LU, the U.S. Department of Transportation (USDOT) promotes public awareness by posting the approved Report for California, and other states’ annual reports, on FHWA’s Web site.

Section III. Collision Factors

The Venn diagram in Figure 1 shows collisions resulting from one or a combination of three factors: the vehicle, the driver, and the road. For example, the [“Interactive Highway Safety Design Module”](#) report indicates that a collision may result from faulty brakes, an impaired driver, or a curve that is too tight for the prevailing speed.[1] Nationwide, 12 percent of all collisions involve some factor of the vehicle traveling the roadway; 34 percent involve some characteristic of the roadway, and 93 percent involve human factors. Of the total collisions represented by this figure, 57 percent involve human factors alone, 3 percent involve roadway environmental factors alone, 2 percent involve vehicle factors alone, and 37 percent involve a combination of these factors. This information shows the importance of a holistic approach to roadway safety. To provide safer trips on California’s roadway system, efforts to improve roadway safety need to focus on engineering, education, enforcement, and emergency medical services.

Figure 1 – Collision Factors [1]

[1] Lum and Reagan (1995), Public Roads 58 (3), Winter 1995 “Interactive Highway Safety Design Module.” <http://www.tfrc.gov/pubrds/winter95/p95wi14.htm>.

Section IV. California Roadway Data

Table 1 shows California’s most recent and currently available, roadway information segmented by city streets, county roads, and State highways (roadways maintained by the California Department of Transportation (Department)). City streets and county roads have roughly similar lengths of maintained miles and lane miles; however, city streets carry more traffic than county roads. A review of the State Highway System (SHS) reveals that, even though the SHS constitutes fewer maintained miles and lane miles than city and county roads, the SHS carries the majority of vehicle miles traveled (VMT) in California. [2]

Table 1 – California’s Roadway System [2]

Roadway	Total Maintained Miles	Lane Miles	Total Annual VMT (in millions)
1. State Highway System	15,270	50,733	184,894
2. City Streets	73,570	165,468	112,746
3. County Roads	65,092	132,296	32,039
Sub-Total (2+3, City Streets plus County Roads)	138,662	297,764	144,785
Total:	153,932	348,497	329,679

[2] 2007 California Public Road Data, Department of Transportation, Highway Performance Monitoring System (HPMS), page 8.]

Section V. Methodology

A data-driven approach was used to develop the methodologies for identifying the Report locations on both the SHS and local streets and roads to be included in the Report. Different methodologies were used for these two roadway systems.

State Method

For the purpose of the Report, the Department used the SHS location information from the Traffic Accident Surveillance and Analysis System (TASAS) Table C Report for the fourth quarter of 2007. The TASAS Table C Report provides information for the 36-month period, from January 1, 2005, through December 31, 2007. The locations on the TASAS Table C Report were sorted into three lists: roadway segments (0.2-mile), intersections (includes 250 feet on all approaches), and ramps (includes entry, exit, and body of ramp). For each of these lists, the top 2.5 percent locations by fatal and injury collision rates and the top 2.5 percent locations by the number of fatal and injury collisions were identified. No highway segment or ramp locations are identified by both fatal and injury collision rates and the number of fatal and injury collisions. One intersection location was identified by both the fatal and injury collision rate and the number of fatal and injury collisions. This procedure resulted in identifying the top 5 percent of locations on the SHS for inclusion in the Report (88 roadway segments, 26 intersections, and 28 ramps). The results are shown in [Appendix A](#).

Local Method

The California Highway Patrol's Statewide Integrated Traffic Records System was used to obtain collision information for identifying locations on local streets and roads for the Report. The local streets and roads were divided into half-mile segments, resulting in a total of 275,664 segments. Collision concentrations were determined for segments that experienced at least one fatal or severe injury (F+SI) collision from 2005 through 2007, with the assumption that these could have potential safety needs. There were 18,188 locations identified that could have potential safety needs. These segments were sorted to generate lists by county. Each list was sorted from high to low, by the number of F+SI collisions, per segment. Following that, the top 5 percent locations for each of these lists were identified. Locations with at least three or more F+SI collisions were included in the report. The results (892 locations) are shown in [Appendix B](#).

Section VI. Remedies, Impediments to Implementation, and Cost

Figure 1 graphically shows how the roadway, the driver, and the vehicle are all involved in fatal, injury, and property-damage-only collisions. Efforts to improve safety on the SHS and local streets and roads must continue to incorporate engineering, education, enforcement, and emergency services countermeasures and strategies. California's SHSP includes 16 safety Challenge Areas. The most effective strategies and countermeasures from each Challenge Area were consolidated into the "Implementation of the SHSP" document, which resulted in 152 actions. The 152 actions have been identified by the actions that can be implemented in the next two years and the actions that will take longer than two years to implement. Implementation of the SHSP will continue for the duration of SAFETEA-LU.

In its annual "Highway Safety Improvement Program Report" to FHWA for fiscal year 2008/09, the Department reported that it awarded \$117.4 million of State and federal money to safety projects. The projects consisted of intersection improvements, roadway and structure improvements, roadside improvements, signs, beacons, rumble strips, and barriers.

The California Office of Traffic Safety (OTS) reported to FHWA, in the Highway Safety Plan for the 2009 federal fiscal year, that California's planned fund distribution for all active grants totaled more than \$90 million for the following program areas: alcohol and other drugs, emergency medical services, community-based organizations, occupant protection, pedestrian and bicycle safety, police traffic services, roadway safety, and traffic records.

Section VII. Discovery and Admission into Evidence

As stated in United States Code, title 23, section 148(g)(4):

Discovery and admission into evidence of certain reports surveys, and information.--Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for any purpose directly relating to paragraph (1) or subsection (c) (1) (D), or published by the Secretary in accordance with paragraph (3), shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location identified or addressed in such reports, surveys, schedules, lists, or other data.

The information is also protected by United States Code, title 23, section 409, discovery and admission as evidence of certain reports and surveys.

Section VII. Appendix A. 5 Percent Locations, State Highway System

California Department of Transportation Contact

For questions regarding an SHS location, please contact the Public Information Office at (916) 654-5782.

A1: Roadway Segment Locations

Summary

The table in this section displays information for 88 roadway segment locations on the SHS from 17 counties in California. The 88 roadway segment locations represent 5 percent of all roadway segment locations identified by the Traffic Accident Surveillance and Analysis System (TASAS) Table C Report as discussed in the body of the Report.

How to Read the Table

The locations in this table are sorted alphabetically by county, ascending by route, and ascending by postmile.

The table displays location information in the following columns:

1. County = The California county where the roadway is located.
2. Route = The SHS Route number.
3. Postmile = The Department uses a postmile marker system for SHS location identification. Beginning with each county's boundary, every roadway on the SHS starts at mile zero (0) and increases from south to north moving northbound and west to east moving eastbound.

Example Roadway Segment Location

County	Route	Location (0.2 Mile Segment Length With Beginning Postmile)
Alameda	80	003.853 to 004.053 WB

This is a 0.2-mile roadway segment along westbound Interstate 80 in Alameda County, which goes from about 3.853 miles east of the western Alameda County line to about 4.053 miles east of the western Alameda County line.

Discovery and Admission into Evidence

As stated in United States Code, title 23, section 148(g)(4):

Discovery and admission into evidence of certain reports surveys, and information.--Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for any

purpose directly relating to paragraph (1) or subsection (c)(1)(D), or published by the Secretary in accordance with paragraph (3), shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location identified or addressed in such reports, surveys, schedules, lists, or other data.

The information is also protected by United States Code, title 23, section 409, discovery and admission as evidence of certain reports and surveys.

A2: Intersection Locations

Summary

The table in this section displays information for 26 intersection locations on the SHS from 14 different counties in California. The 26 intersection locations represent 5 percent of all intersection locations identified by the Traffic Accident Surveillance and Analysis System (TASAS) Table C Report as discussed in the body of the Report.

How to Read the Table

The locations in this table are sorted alphabetically by county, ascending by route, and ascending by postmile.

The table displays location information in the following columns:

1. County = The California county where the intersection is located.
2. Route = The SHS Route number.
3. Postmile = The Department uses a postmile marker system for SHS location identification. Beginning with each county's boundary, every roadway on the SHS starts at mile zero (0) and increases from south to north moving northbound and west to east moving eastbound. In addition to the postmile information, the intersection cross street is listed to provide further detail.

Example Intersection Location

County	Route	Location[3] Postmile
Amador	88	33.47 Nob Hill Ct

This is an intersection location along State Route 88 in Amador County, which is approximately 33.47 miles east of the western Amador County line and intersects with Nob Hill Court.

[3] By postmile, the intersection location includes the intersection and 250 feet into all approaches and departures.

Discovery and Admission into Evidence

As stated in United States Code, title 23, section 148(g)(4):

Discovery and admission into evidence of certain reports surveys, and information.--Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for any purpose directly relating to paragraph (1) or subsection (c)(1)(D), or published by the Secretary in accordance with paragraph (3), shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location identified or addressed in such reports, surveys, schedules, lists, or other data.

The information is also protected by United States Code, title 23, section 409, discovery and admission as evidence of certain reports and surveys.

Table of California State Highway System Intersection Locations

Ventura	1	19.621 Gonzales Rd
Ventura	34	5.295 Rose Ave

[4] By postmile, the intersection location includes the intersection and 250 feet into all approaches and departures.

A3: Ramp Locations

Summary

The table in this section displays the information for 28 ramp locations on the SHS from 12 different counties in California. The 28 ramp locations represent 5 percent of all ramp locations identified by the Traffic Accident Surveillance and Analysis System (TASAS) Table C Report as discussed in the body of the Report.

How to Read the Table

The locations in this table are sorted alphabetically by county, ascending by route, and ascending by postmile.

The table displays location information in the following columns:

1. County = The California county where the ramp is located.
2. Route = The SHS Route number.
3. Postmile = The Department uses a postmile marker system for SHS location identification. Beginning with each county's boundary, every roadway on the SHS starts at mile zero (0) and increases from south to north moving northbound and west to east moving eastbound. In addition to the postmile information, the ramp cross street is listed to provide further detail.

Example Ramp Location

County	Route	Location[5] Postmile
Fresno	99	24.741 099 SB Off

This is an off-ramp location along southbound State Route 99 to Princeton Avenue in Fresno County, which is about 24.741 miles north of the southern Fresno County line.

Discovery and Admission into Evidence

As stated in United States Code, title 23, section 148(g)(4):

Discovery and admission into evidence of certain reports surveys, and information.--Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for any purpose directly relating to paragraph (1) or subsection (c)(1)(D), or published by the Secretary in accordance with paragraph (3), shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location identified or addressed in such reports, surveys, schedules, lists, or other data.

The information is also protected by United States Code, title 23, section 409, discovery and admission as evidence of certain reports and surveys.

Section IX. Appendix B. 5 Percent Locations, Local Streets and Roads

Contacts

For questions regarding the method chosen for the local streets and roads portion of the Report, please contact the California State Association of Counties at (916) 327-7500 or the League of California Cities at (916) 658-8200. For questions regarding a particular local street or road location, please contact the public works department in the jurisdiction where the location exists.

Summary

The table in Appendix B displays information for 892 locations on local streets and roads. These 892 locations represent 5 percent of the locations identified and discussed in the body of the Report.

How to Read the Table

The locations in this table are sorted by county and then by the number of fatal and severe injury collisions.

The table displays location information in the following columns:

1. No. = Location identification number.
2. County = The California county where the local street or road is located.
3. Primary = The name of the street or road for the location.
4. Secondary = The reference cross street or road intersecting the primary street or road.
5. From/To = The distance from the intersection of the primary and secondary street or road along the primary street or road defining the half-mile segment. A “minus” means either south of or west of, depending on the direction of the street.

Example

No.	County	Primary	Secondary	From	To
1	Alameda	International Blvd	38th Ave	-722	1918

This location is in Alameda County and is on International Boulevard; it begins 722 feet either south or west of 38th Avenue and ends 1918 feet north or east of 38th Avenue.

Discovery and Admission into Evidence

As stated in United States Code, title 23, section 148(g)(4):

Discovery and admission into evidence of certain reports surveys, and information.--Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for any purpose directly relating to paragraph (1) or subsection (c)(1)(D), or published by the Secretary in accordance with paragraph (3), shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location identified or addressed in such reports, surveys, schedules, lists, o

The information is also protected by United States Code, title 23, section 409, discovery and admission as evidence of certain reports and surveys.
